Subject: Re: NFB Site: Area 5 Disposal Proposal

Well, congratulations (on making the first shipment)!

... And I'll keep tabs on the schedule implications, obviously.

> Good Evening:

>

> Today we shipped out three trucks and all went pretty well after we worked out the bugs with the first truck. The overall concept of our blending has been approved as well as the TCLP for the areas of interest for this winter's planned shipments (GNBC Office Area and Area 5). Attached is the rad proposal for Area 5 medium concentration material. Hopefully, Joe is done with his training and available to review the document. We performed gamma survey of Area 5 as we separated the different concentration layers. We also collected samples. Those samples were analyzed by our on-site HpGe as well as Pace Laboratory (alpha Spec and 21 day in-growth lab data documents attached). There is also a table with both lab and HpGe results.

>

> Some clarifications. Pace Lab takes all three sample jars of each sample #, combines, dries, pulverizes and homogenizes. Then portions of the samples are used to perform the 21 day in-growth gamma spec and alpha spec. The gamma spec jar is a different size than what we use for our gamma spec as well. Therefore, we need to do some more work on getting an "apples to apples" comparison with our gamma spec and theirs. We will start that in January. So the gamma readings we obtained was from a sample that was predominately the unprocessed rock-like high gamma material. So this was not really a true representation of the entire sample collected and not comparable to the laboratory results. However, we want to be conservative so we are proposing to use our HpGe results in determining our disposal proposal. In this case, the medium concentration material does not require blending but meets the acceptance criteria on its own.

>

> Please let us know tomorrow if this is acceptable and we can schedule trucks for this material on Monday, December 19, 2016. If not, we will be forced to shut down operations until we return to site in January. Meaning, disposal is the only work we can conduct after tomorrow.

> I agree, " Good News!". Now comes the question, how soon can we expect to schedule trucks. As of right now, there are three truckloads ready to ship. The box numbers and location are included in the attachments sent out by Eric. If possible, could we schedule at least one truck for tomorrow morning, Thurs.12/15. I realize this is short notice. The reason is we have people going into rotation and holiday schedules and we would like to be able to go through our onsite procedures screening trucks and documentation before our key personnel leave for the holidays. Additional material from Area 5 may be ready to ship as soon as Monday of next week. Lyndsey is currently working on instrumentation and screening procedure proposal for that material.

example, ID: N002-TRENCH-0003-01, Lab Sample 160-13352-14, Chromium is at 280 mg/kg , Lead at
1300 mg/kg. That sample is from GNBC Warehouse #3. We aren't performing that part of the removal
until the Spring the earliest. Presently we are only addressing the two areas that we are excavating now
and need to get moving on with T&D. Each area we address moving forward will have additional rad
analysis as described previously in our proposal and now TCLP analysis prior to anything being shipped
off site.

> Good Morning Everyone:
>
> We have been really busy. Slowly but surely making progress here at the site. We sent out samples
from Area 5 and the GNBC Office for TCLP. Those results are attached. Thankfully, no results exceed
the TCLP limits. With the acceptance of the GNBC Office blending disposal plan last month (attached)

and now the clearance of the TCLP, we should be ready to start shipping the office area. Right now we have segregated the GNBC cubic hard boxes into three Conex Containers. Each container has 22 cubic yard boxes. 16 higher concentration boxes with 6 low concentration boxes as per the blending document. I have attached a truck loading document that breaks down the specific boxes (ID# and individual box weight).

>

> We are still working with the lab to get data on Area 5. We may have some other proposals later utilizing the low level material we have from Area 5 to blend with the remainder of the high concentration cubic yard boxes from GNBC. Lyndsey may be calling Joe today if he is available.
